# 2010 WEEKEND COMMUTER RAIL PASSENGER BOARDING & ALIGHTING COUNT

## TRAIN-BY-TRAIN DETAIL

This document presents tabulations of a station passenger count for each train of the commuter rail system conducted during Saturdays and Sundays of the summer and fall of 2010. Data collection was performed by an outside contractor who was responsible for hiring and deploying survey personnel. Counters were positioned at the entranceway of each revenue car, covering all trains for a given rail line on a single Saturday and a single Sunday, with the exception of the Electric District, where counts were spread over two weekends. This full count was done twice, once in the summer and once again in the fall. The North Central Service and Heritage Corridor were not counted, because they have no weekend service. Also, the South Shore line was not counted.

The passenger activity (i.e., boardings, or “ons”; and alightings, or “offs”) is organized by rail line, which are ordered geographically from south to north, as shown in the “List of Tables” on page iii. Data for each station are displayed by train, which are ordered chronologically according to downtown station arrival (inbound) and departure (outbound). Data are separated between inbound (even numbered trains) and outbound (odd numbered trains). The departure and arrival times are also shown for each train. The day(s) and date(s) of each line count are also noted. In addition to the train level data presented, station passenger activity is summarized by inbound, outbound, and all trains. Count dates for each line, and significant concurrent special events are shown on the following page.

Other explanatory points and qualifications include the following:

- A blank cell represents a station not served by a particular train. Zero represents a station stop where there was no passenger activity reported (i.e., no boardings or alightings).
- Maximum Load Point is the last station on inbound trains with the greatest arriving load, and the first station on outbound trains with the greatest departing load.

- Intermediate Passengers is the sum of riders not traveling to a downtown station inbound or from a downtown station outbound.
- Passenger Miles represents the combined number of miles that all passengers traveled on a given train.
- Average Trip Length is the number of passenger miles divided by the total number of passengers on a given train.
- Passenger transfer activity on Saturdays has been estimated and isolated at particular stations on the Electric District to discriminate between riders entering or leaving stations from passengers changing trains. Saturday transfer activity occurs at Electric District 55th-56th-57th, 59th, 63rd, 67th, and 115<sup>th</sup> stations.

A detailed examination of the entire 2010 weekend passenger count data set was made for completeness and accuracy by Metra staff, which led to recounts being made on a few trains. Overall, the accuracy of the information was judged good for the specific day of each line's count. However, the validity of the counts as being representative of "typical" ridership levels is somewhat more difficult to gauge. A one-day count, as opposed to averages derived from multiple observations, is more susceptible to random variations due to factors like weather, road traffic conditions, and time of year. Week-to-week fluctuations are usually greater for a weekend count than a weekday count, because a larger portion of weekend riders travel for recreational and other discretionary purposes, which vary depending on events. Given that no other data source presently exists which breaks weekend passenger use down to the station stop/train level, most users will need to assume that the data is representative.
