Metra System Map (Fall 2018)

FALL 2018 COMMUTER RAIL SYSTEM WEEKDAY STATION BOARDING/ALIGHTING COUNT TRAIN-BY-TRAIN DETAIL

This report summarizes results of the Metra station passenger boarding/alighting count taken during the fall of 2018, and is intended as a companion to the separate train count summary results report. Detailed below are the

- Count methodology,
- Report organization, and
- List of tables.

Count Methodology

This 2018 project involved use of survey personnel positioned at the entranceway of each revenue car, or on station platforms if more efficient. Weekday counts were performed on Tuesdays, Wednesdays, and Thursdays in September and November and on Mondays, Tuesdays, Wednesdays and Thursdays in October. Counters recorded the number of passengers boarding and alighting at each station stop on pre-coded forms that were later keyed and computer processed. (The South Shore Line trains of the Northern Indiana Commuter Transportation District were not counted.)

The Fall 2018 Commuter Rail System Weekday Station Boarding/Alighting Count (2018 count) was managed by an outside contractor, who was responsible for recruiting, training, scheduling, and supervising count personnel, and for data entry. A detailed examination of the 2018 count by the contractor and Metra staff led to

recounts being made on a few trains. Metra staff analyzed and tabulated the final data.

Overall, the accuracy of the information was judged good for the specific day(s) of each line's count. However, the validity of the counts as being representative of how riders "typically" use the service is somewhat more difficult to gauge. A one-day count, as opposed to averages derived from multiple observations, is more susceptible to random variations due to factors like weather, traffic conditions, day of week, and time of year. Given that no other data source presently exists which breaks passenger use down to the station stop/train level, most users of this report will need to assume that the data is representative of ridership patterns.

Organization of Train-By-Train Detail Report

In this tabulations report the passenger boarding and alighting activity (i.e., ons and offs) is organized by rail lines, which are ordered geographically from south to north. Data for each station are displayed by trains, which are ordered chronologically according to downtown station arrival (inbound) and departure (outbound). Data are separated between inbound (even-numbered trains) and outbound (odd-numbered trains). The departure and arrival times are also shown for each train. The day(s) and date(s) of each line count are also noted.

In addition to the train level data presented, station passenger activity is summarized by inbound, outbound, and all trains.

Other explanatory points and qualifications include the following:

- A blank cell represents a station not served by a particular train. Zero represents a station stop where there was no passenger activity reported (i.e., no boardings or alightings).
- Maximum Load Point stations are highlighted where each inbound train carried its maximum arriving load or where each outbound train carried its maximum departing load.
- Intermediate Passengers is the sum of riders not traveling to a downtown station inbound or from a downtown station outbound. The six downtown stations are Union Station, Ogilvie Transportation Center, LaSalle Street Station,

Millennium Station, Van Buren Station, and Museum Campus/11th Street Station.

- Passenger Miles represents the combined number of miles that all passengers traveled on a given train.
- Average Trip Length is the total number of passenger miles divided by the total number of passengers on a given train.

The companion Summary Results report presents station passenger information in a more summarized format and provides results from previous counts.
